TECHNICAL BULLETIN

Quality Power Products, Inc. crankshaft #QPAR40485 is designed to replace John Deere® # AR40485, marked R40570 (casting). This crankshaft fits all late 3020 tractors above S/N 123,000 or Engine S/N 125,000 & up. It has a lip on the flywheel end for mounting the flywheel and 2 studs and four 1/2" capscrews.

The early 3020 crankshaft John Deere® Part #AR26428, marked R26540 (casting) fits 3020 tractors below S/N 123,000 or engines with S/N below 125,000. This crankshaft is dimensionally equivalent to the AR40485, with the exception of the lip on the flywheel end for mounting the flywheel.

Consequently, it may be necessary to have your flywheel center pilot machined or milled to 2.85" to fit the later model crankshaft which will update the crank and flywheel combination.
